

# Year 9 Photography

In Year 9 students develop a range of skills including camera techniques, lighting, photoshop editing, drawing and written analysis. They explore the origins of photography, using light sensitive paper and make a camera obscura, the most basic camera. Throughout the year students are encouraged to be creative in the classroom and at home, with regular practical and research homework tasks. To broaden the range of locations for photography trips are taken to Southampton common and to London to visit galleries.
